

Measurement protocol - personal radon measurement

1. Measuring instructions:

1. start measuring by removing the measuring devices from the radon-proof packaging (keep the packaging)
2. attach the personal dosimeter PD to your work clothing. Note the daily wearing times in the table for recording working hours.
3. The PD must remain next to the reference exposimeter outside working hours without exception.
4. Do not wash the measuring device with your clothing!
5. place the reference exposimeter PRD where the personal dosimeters are kept outside working hours, e.g. changing room, office, car or in the open air. Place or hang the PRD in a safe place where it can remain for the entire measurement period.
6. the measurement period is 12 months, whereby a dosimeter PD can be used for a maximum of 6 months. The legal requirements of 1 year are also fulfilled by several consecutive individual measurements.
7. at the end of the measurement period, send the measuring devices in their original radon-proof packaging and this completed protocol to the ALTRAC test laboratory in Striegistal.

2. Measurement information

Company address:.....

Measurement from to

Name of the user..... PD number

Reference location Reference number

Total working time..... (in hours & minutes) over the entire measurement period.

3. Note on data privacy

The data collected here will only be used to process this test order. The data and test results will not be published or passed on to third parties.

4. Declaration

With my signature I confirm that I have complied with the measuring instructions and that the information are correct.
